

PAYAL MOR

8684010222 | payalmor20@gmail.com | Delhi NCR

PROFESSIONAL SUMMARY

B.Tech (CSE - AIML) graduate with hands-on experience building AI applications on Azure OpenAI's GPT-4o, including prompt design, visual reasoning chains, and production pipeline work. Have taken AI projects from prototype to production pipelines that process real business data. Comfortable across the stack: Python, REST APIs, SQL, and the data structures and OOP fundamentals that sit underneath good ML engineering.

SKILLS

AI / ML:	Azure OpenAI (GPT-4o Vision & chat), Prompt Engineering, NLP (TF-IDF, Cosine Similarity), Machine Learning, Data Analysis
Languages:	Python, SQL, C#, JavaScript, C++
API & Cloud:	Azure AI Services, REST APIs, JSON, CRUD, Request-Response Design, Git/GitHub
Frameworks:	Flask, Django REST Framework, React.js, .NET Fundamentals, ASP.NET Web API (Basic)
Databases:	SQL Server, MySQL, MongoDB
Frontend:	React.js, JavaScript (ES6+), HTML, CSS, Bootstrap
Foundations:	OOP, Data Structures, Clean Architecture, Logical Problem Solving

PROJECTS

SmartRank — AI Resume Intelligence System — *Python, Flask, NLP, TF-IDF, Scikit-learn, HTML/CSS · GitHub: github.com/Payalmor2003/SmartResumeRanking*

- Built an end-to-end NLP-powered resume ranking web app that scores and ranks candidate PDFs against a job description in seconds.
- Implemented a TF-IDF vectorization and cosine similarity pipeline for semantic skill matching across 60+ tracked skills with a 3-way score breakdown.
- Designed the full-stack system: PDF text extraction (PyPDF2), text preprocessing, ML scoring engine (Scikit-learn), and a recruiter-friendly Flask dashboard.
- Deployed on Render; system architecture handles scalable resume volumes with bias-free, objective candidate evaluation.

AI-Powered Image Classification Pipeline — *Python, Azure OpenAI GPT-4o, REST APIs, SQL Server, Git · GitHub: github.com/Payalmor2003/DocumentClassifier*

- Built an automated image classification pipeline on Azure OpenAI's GPT-4o Vision API that runs end-to-end on real business data, including batch processing and automated file routing.
- Designed the scoring prompt itself: a structured chain-of-thought for visual analysis plus confidence-based routing logic, achieving 97.9% accuracy in production use.
- Added retry and error-handling logic so the pipeline keeps running on messy real-world image batches without manual babysitting.

AANYA — LLM-Integrated AI Tutor Web App — *React.js, Django REST Framework, MongoDB, Azure*

- Built the React frontend for an AI tutoring assistant that consumes and displays responses from an LLM-powered backend.
- Designed components surfacing chat responses, suggestions, and personalized feedback — the user-facing half of an LLM product.
- Worked directly with the backend team integrating LLM-based tutoring features, gaining real exposure to how an LLM product is wired together end to end.

SAKHI — PCOS Detection System — *Python, Machine Learning, Data Analysis · GitHub: github.com/Payalmor2003/SAKHI*

- Built a machine learning model for early PCOS prediction, including data cleaning and feature engineering, to deliver personalized health insights.

INTERNSHIP EXPERIENCE

Junior AI Engineer | Benzeen Pvt. Ltd.

Feb 2026 – Present | Sonipat

- Built a production GPT-4o Vision pipeline that classifies incoming auto part images into business categories (Part, Document, Review, Miscellaneous) with 97.9% accuracy.
- Built a generative AI background removal pipeline (GPT-Image-2) that processes auto part images and delivers clean white-background outputs.

Software Development Intern | Exact IT Solutions

Jul – Sep 2025 | Sonipat

- Completed industrial training in C# and core OOP concepts.
- Got hands-on with REST-style APIs, request-response flow, and how a backend talks to a frontend — useful groundwork for working with AI service APIs.

Software Development Intern | EduAI

Jan – Apr 2025 | Delhi

- Built and maintained the React frontend for AANYA, an AI tutoring platform, wiring it up to an LLM-powered backend.
- Integrated the frontend with a Django REST Framework backend handling LLM outputs — direct exposure to agentic AI product development.

EDUCATION

Bachelor of Technology, CSE (AIML)

2022 – 2026 (Graduated)

Panipat Institute of Engineering & Technology | SGPA: 7.9

Relevant coursework: Machine Learning, NLP, Web Development, Software Engineering, DBMS, OOP, Data Structures, SQL, Python

Senior Secondary Education

2022

Little Angels Sr. Sec. School, Sonipat | 12th: 89%

LANGUAGES

English, Hindi
